Amcrest

Brand Discovery

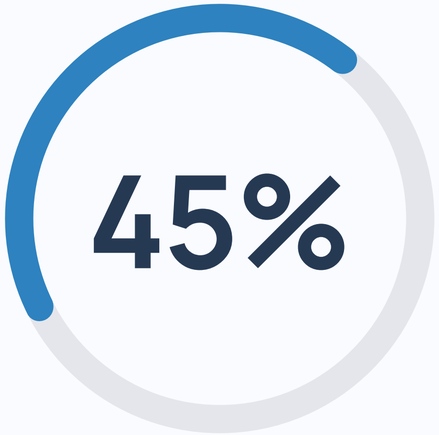

Who They Are

Amcrest is a Texas-based security technology company that brings industrial-grade security to everyday homes and small businesses at an accessible price. Unlike competitors, its core features work without a cloud subscription — every camera supports local storage, and one account covers everything from doorbells to multi-camera systems and GPS tracking.

Target Audiences

Families for Remote Care

Small Business Owners

Young Women Living Alone

Brand Discovery

Desired Conversion

Families for Remote Care

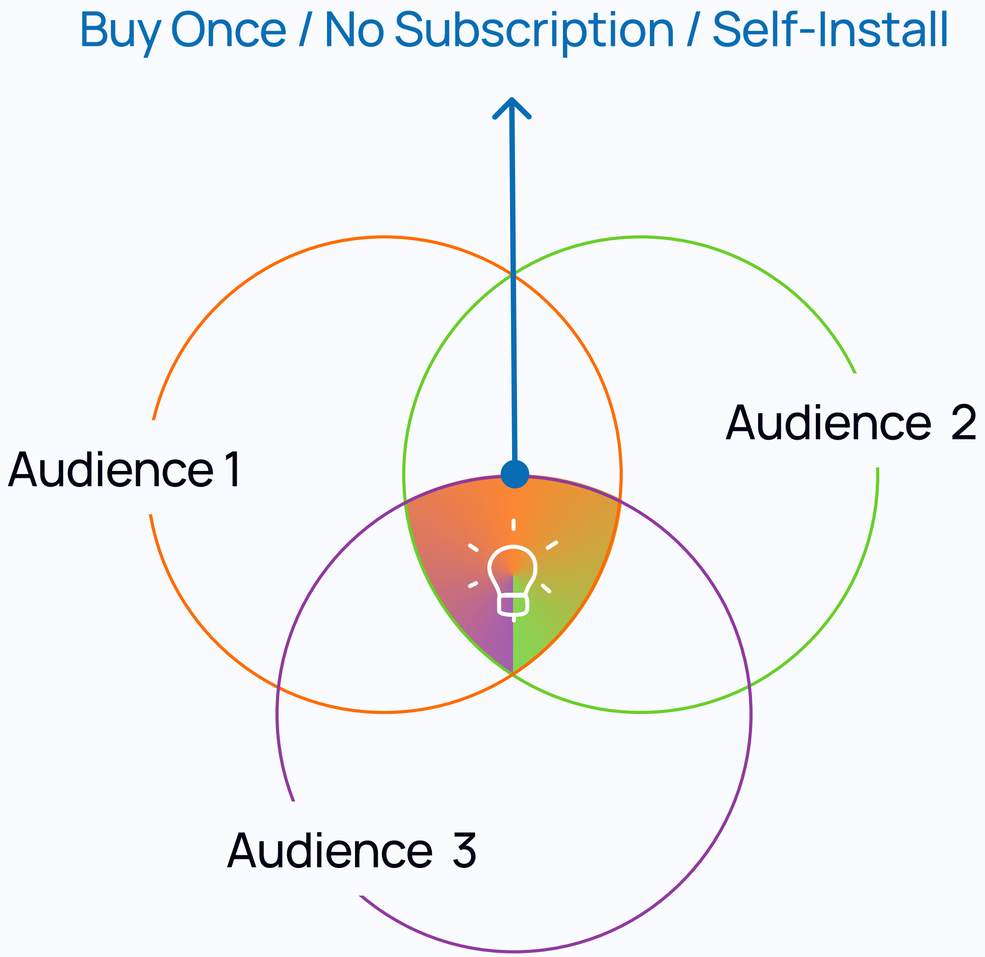

The goal is a one-time bundle purchase. They want every camera — home, kids', in-laws' — under one app, no monthly fees.

Small Business Owners

The goal is a one-time multi-camera purchase. They need to cover 1–3 locations with local storage, no contract.

Young Women Living Alone

The goal is a quick, subscription-free purchase. They want to scan, connect, and be running in minutes.

Dual-Path Navigation

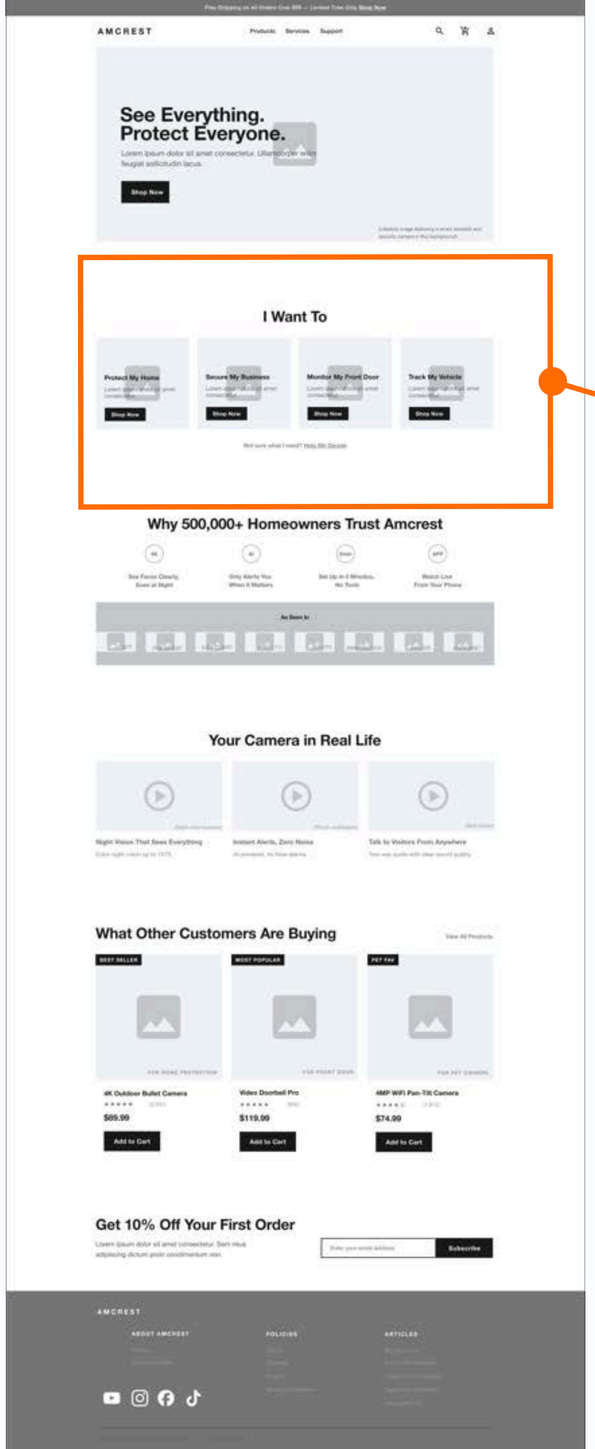

Tabs → Long Page + Anchor Nav

New-User Guidance (Curated Picks + Buying Guide)

Streamlined & Consolidated Navigation

Home

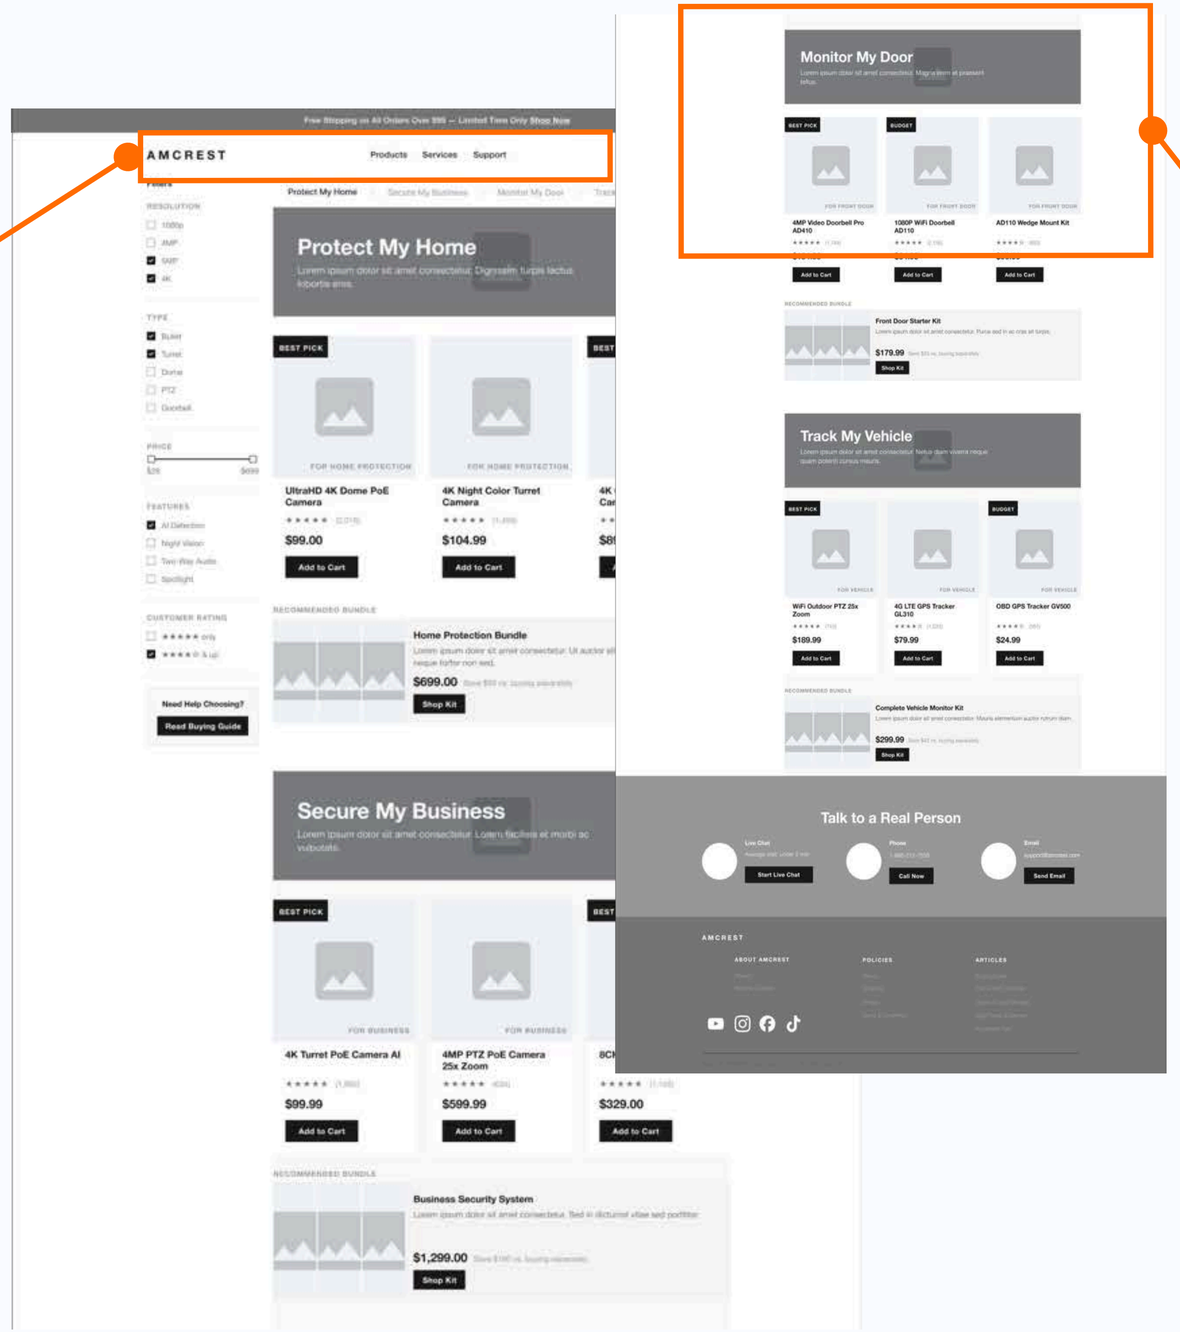

Before: Navigation was organized only by product model, forcing users to understand technical specs before they could choose.

After: Added a second, need-based path that sorts users by real-life scenarios — directly mapped to the target audiences.

Product_Solutions

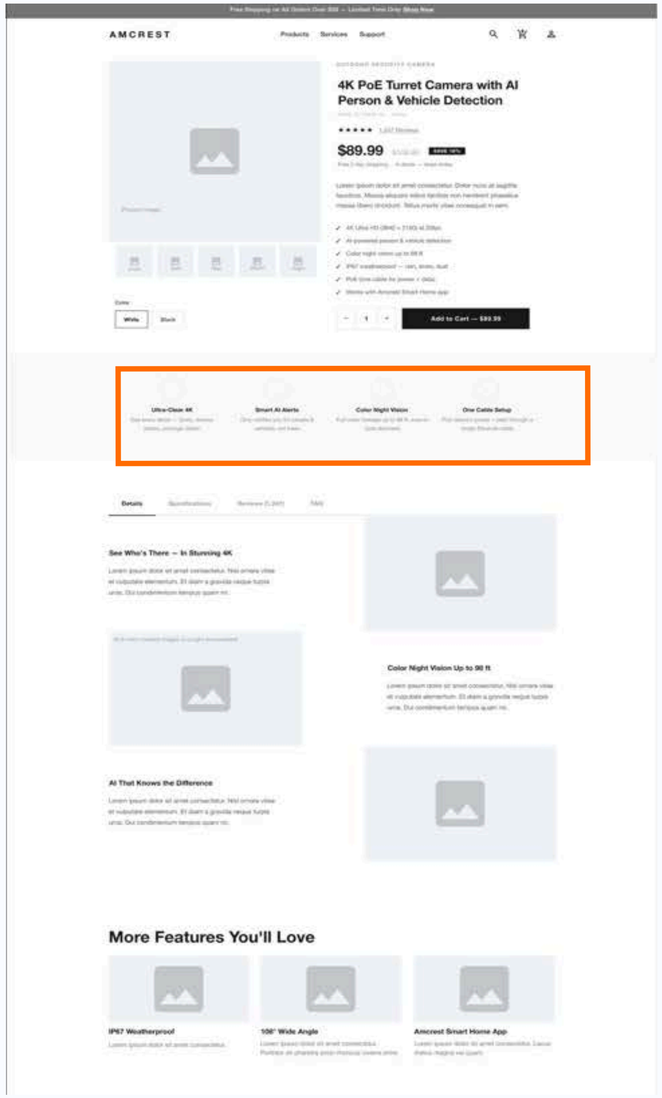

Path1: Accessible via the “Products” mega nav at the top. This path is designed for users who know exactly what they want and can understand product model numbers.

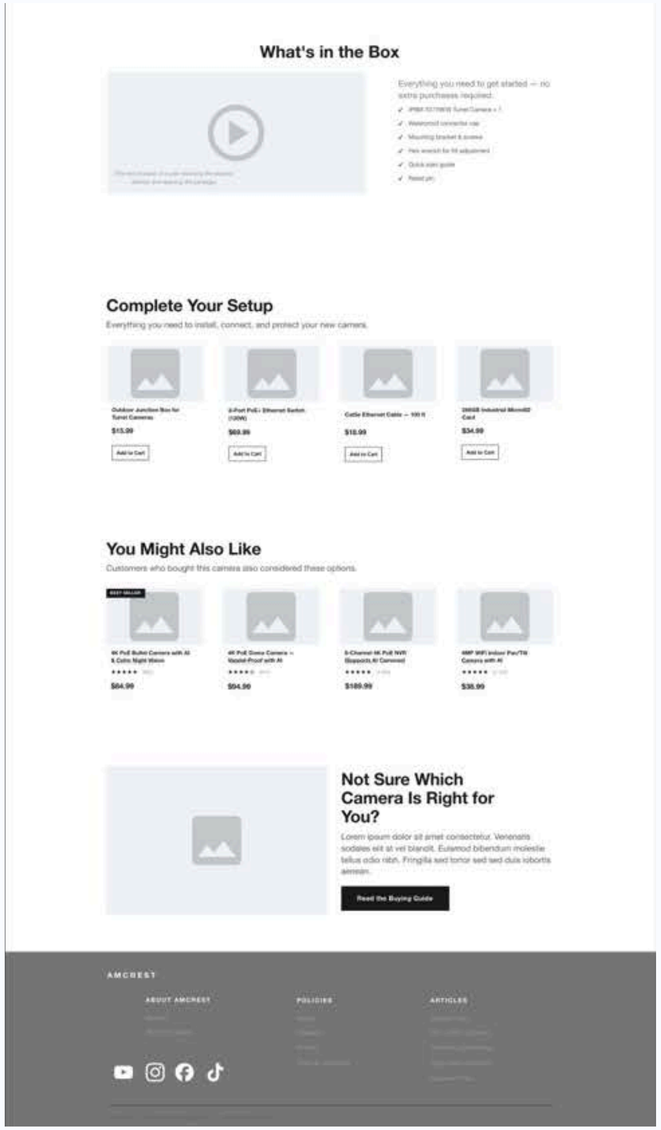

Path2: Accessed from the homepage, is specifically designed for new users who are unfamiliar with the product.

Product_Detailed

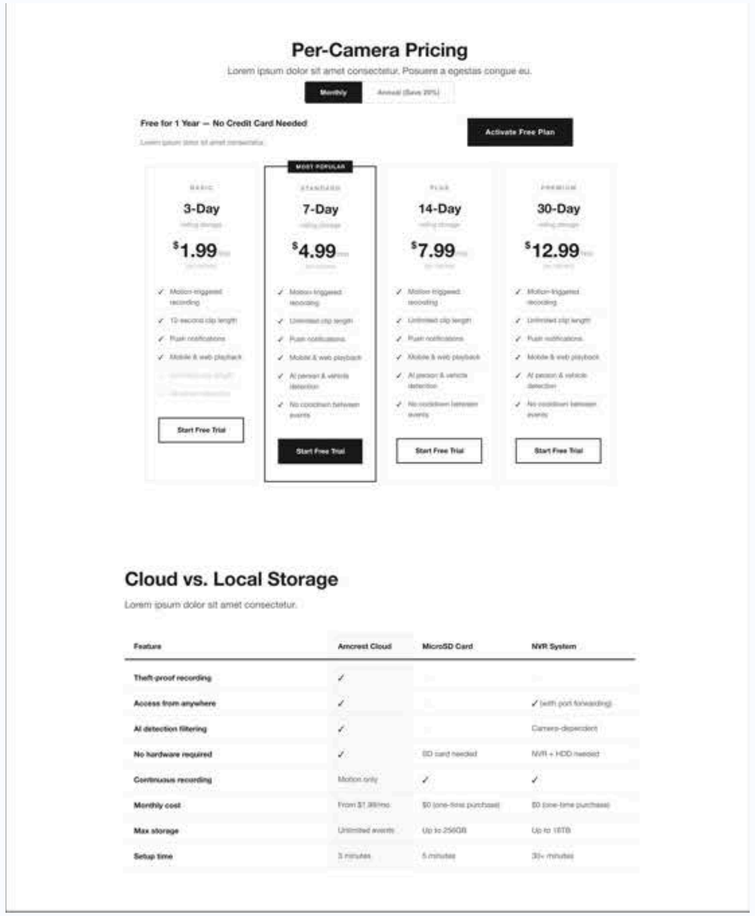

Technical specs and model numbers were rewritten in plain, benefit-driven language, with the "local storage, no subscription required" value proposition brought front and center , so even users who don’t understand model numbers can grasp what the product does and why it fits them.

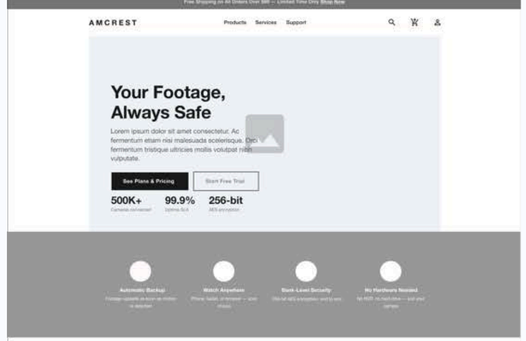

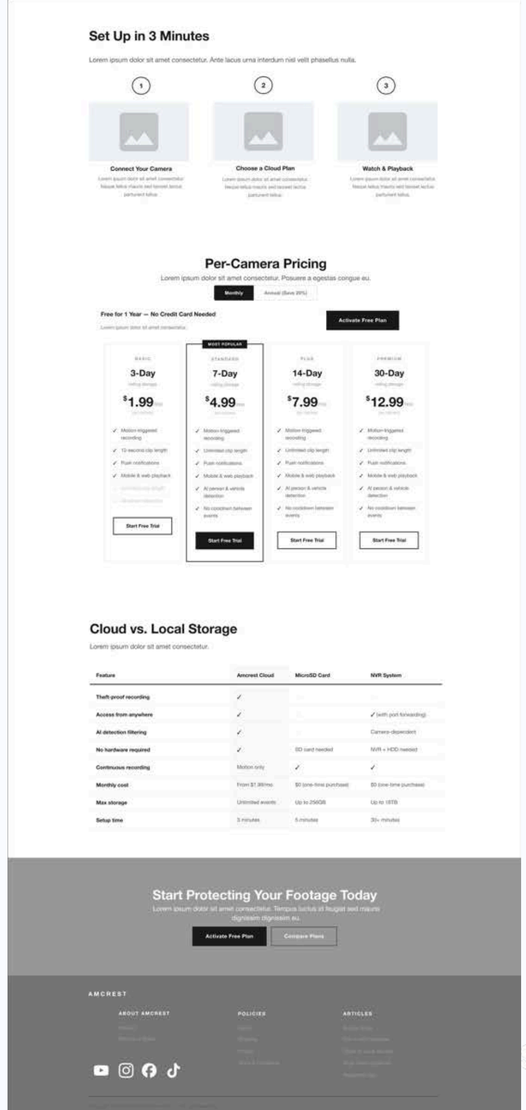

Service_Cloud

Plans and pricing are now surfaced up front and laid out side-by-side with local storage, so users can compare "cloud vs. local" at the same level without logging in.

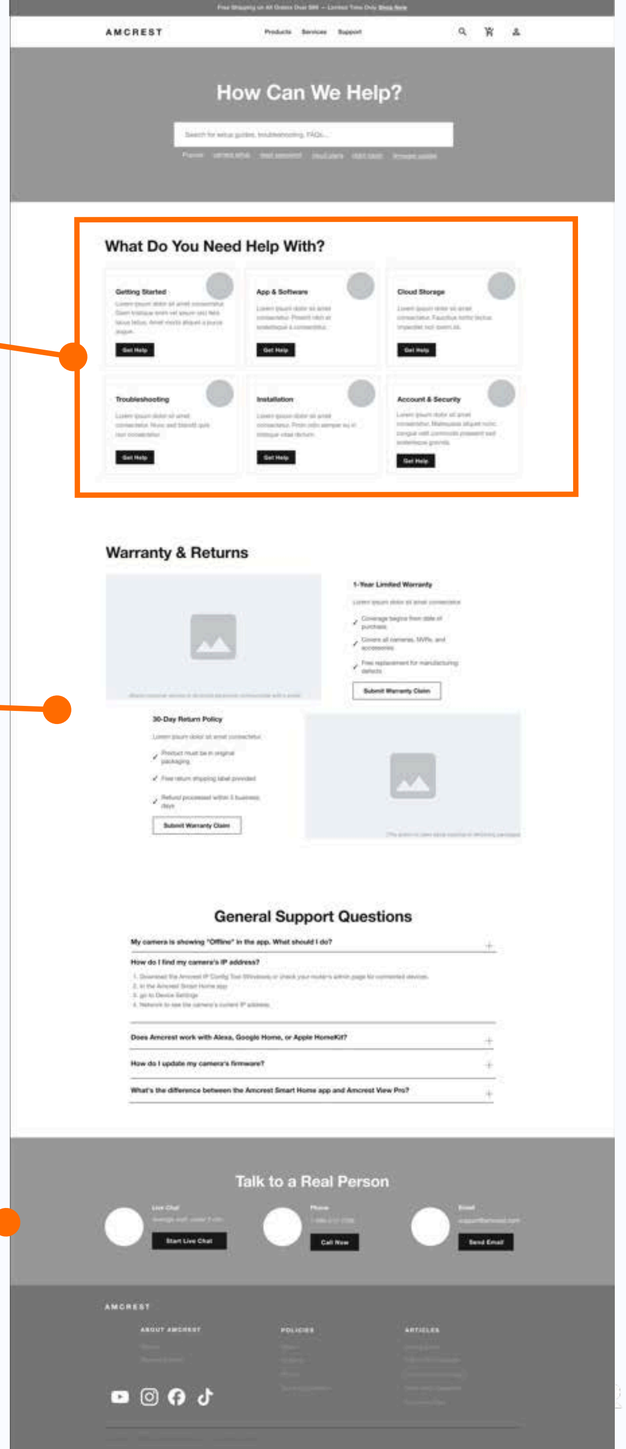

Support_Center

The Support page was reorganized around how users intuitively look for help.

Scattered articles and FAQs were re-categorized by topic.

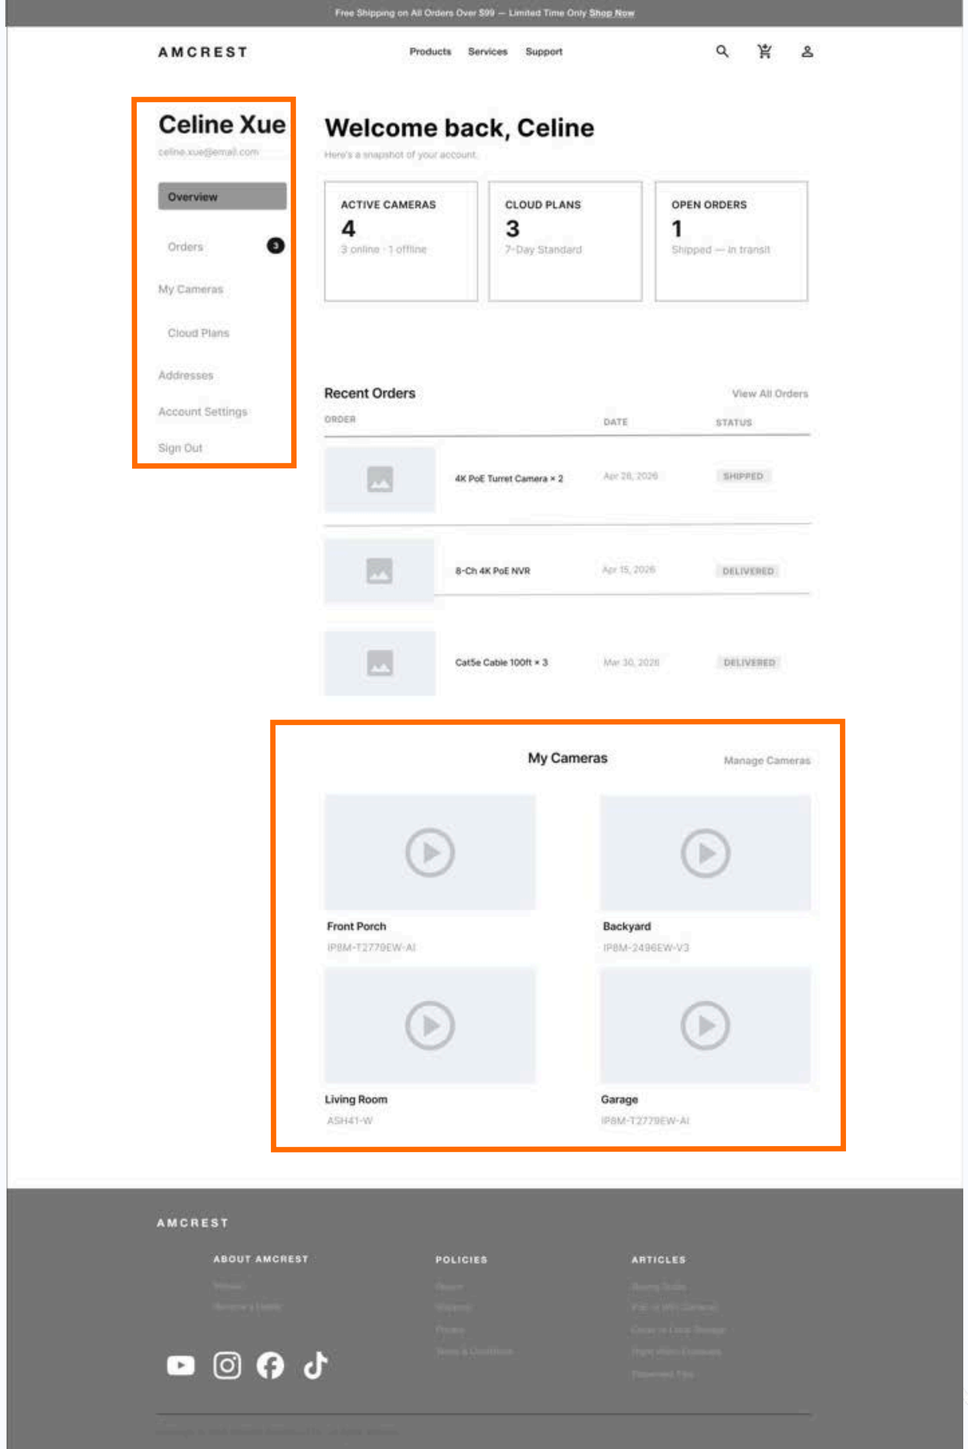

Warranty & Returns — previously buried under Articles — was moved here, where users naturally expect to find it.

The auto-popping live chat was consolidated into one contact area (Live Chat / Phone / Email).

Account

Rebuilt the Account page from a generic e-commerce template into a product management hub: the cluttered sidebar was consolidated into 6 clear entries, and add My Cameras and Cloud Plans sections let users manage their cameras and services — not just their account.

Connect

Route by need

Build credibility

Proof

Convert

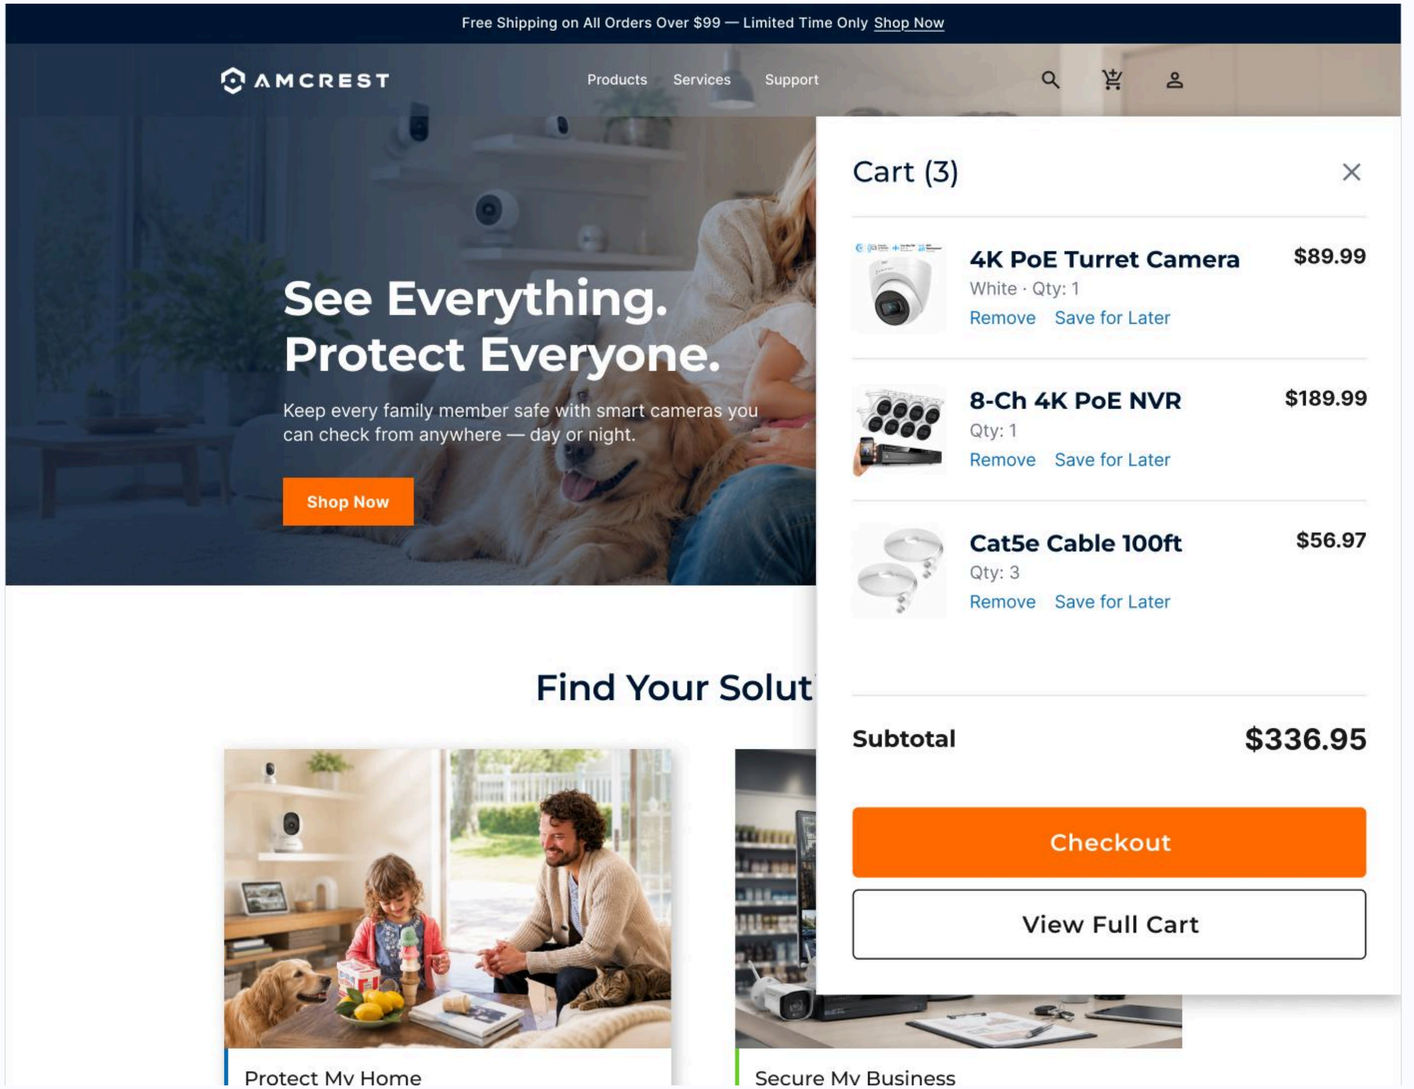

Directly addressing the new-user pain point from the Brand Discovery.

Home_Cart Overlay

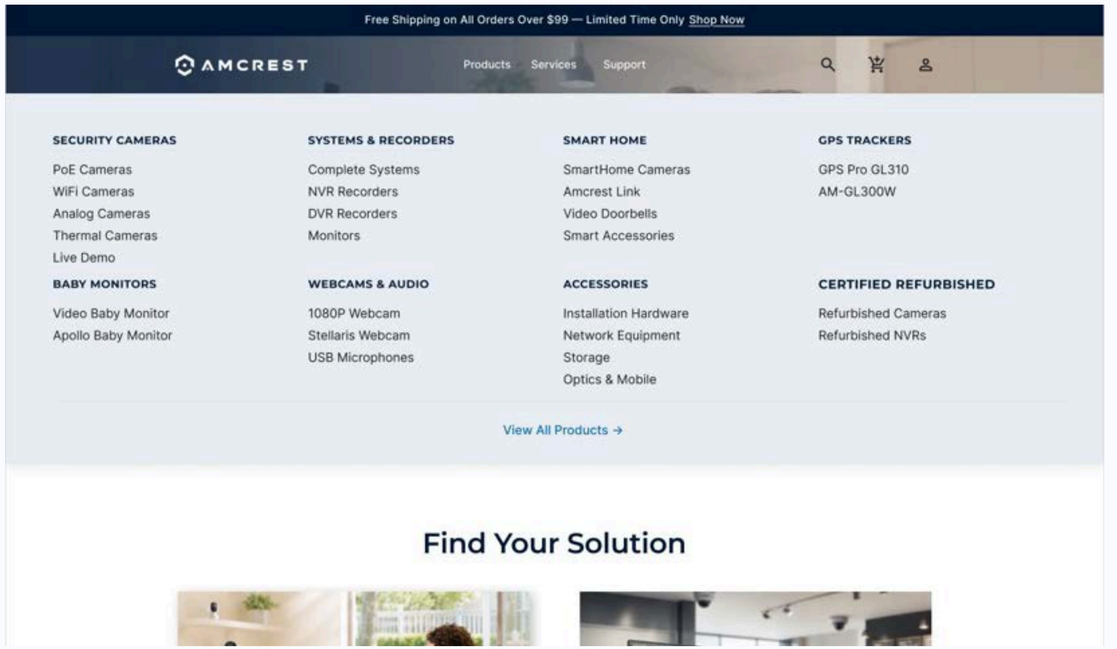

The cart overlay was rebuilt from a cluttered layout into a clean, focused checkout entry:

- long spec-heavy product names were shortened to readable titles;
- each item gained Remove / Save for Later options; and distracting phone numbers and third-party pay buttons were removed in favor of a clear orange Checkout CTA.

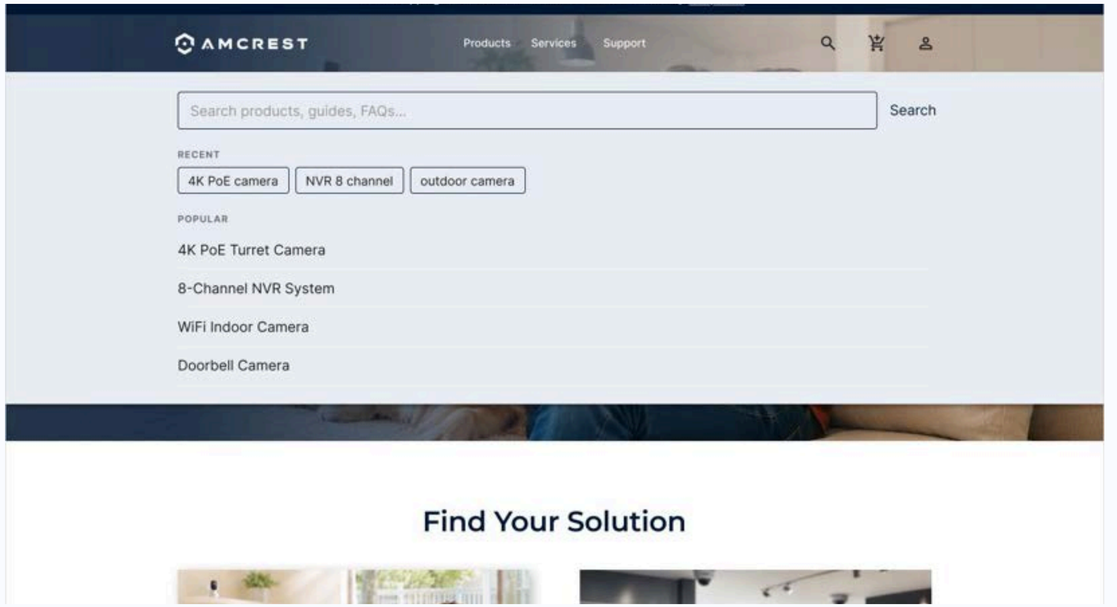

Home_Nav/Search Overlay

Restructure product categories based on user needs, rather than product models and series.

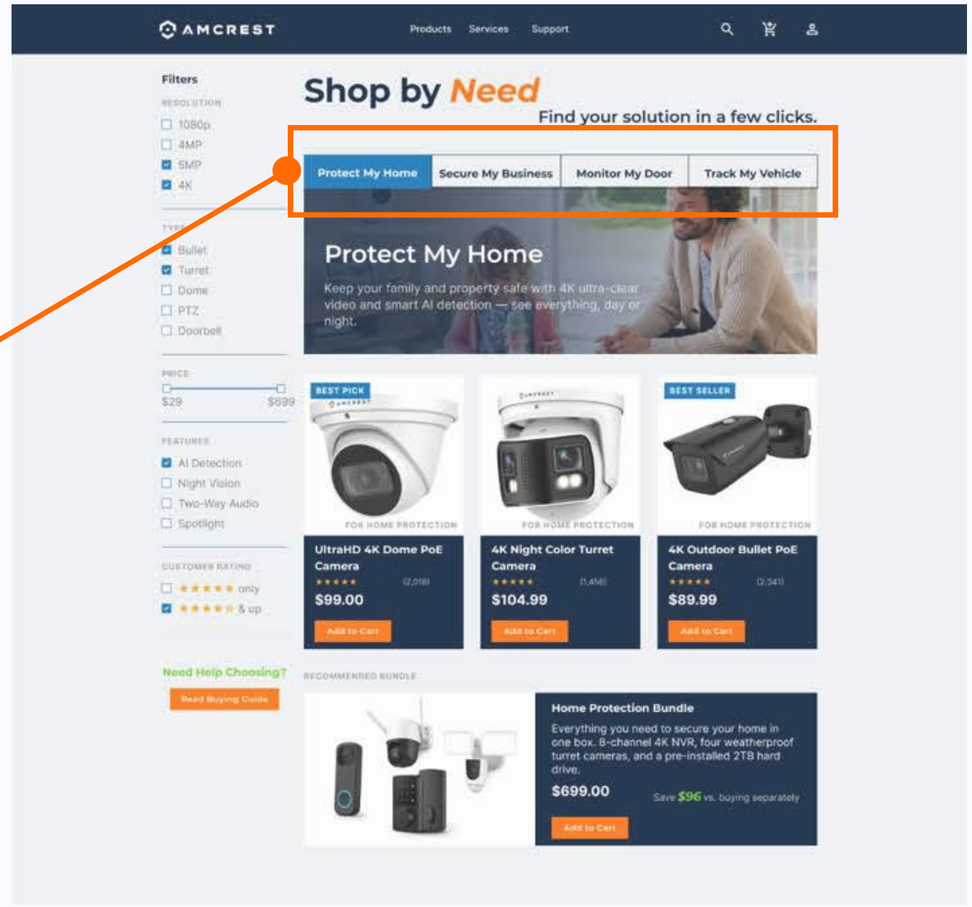

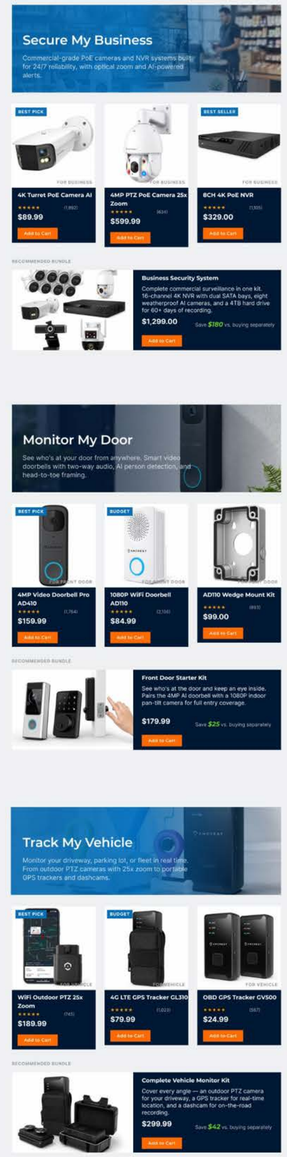

Search was moved from a cramped box jammed into the top nav into a full-width dropdown panel: it adds Recent and Popular suggestions to help users(especially those who don't know exact model names) find common products fast.

Product_Sloution

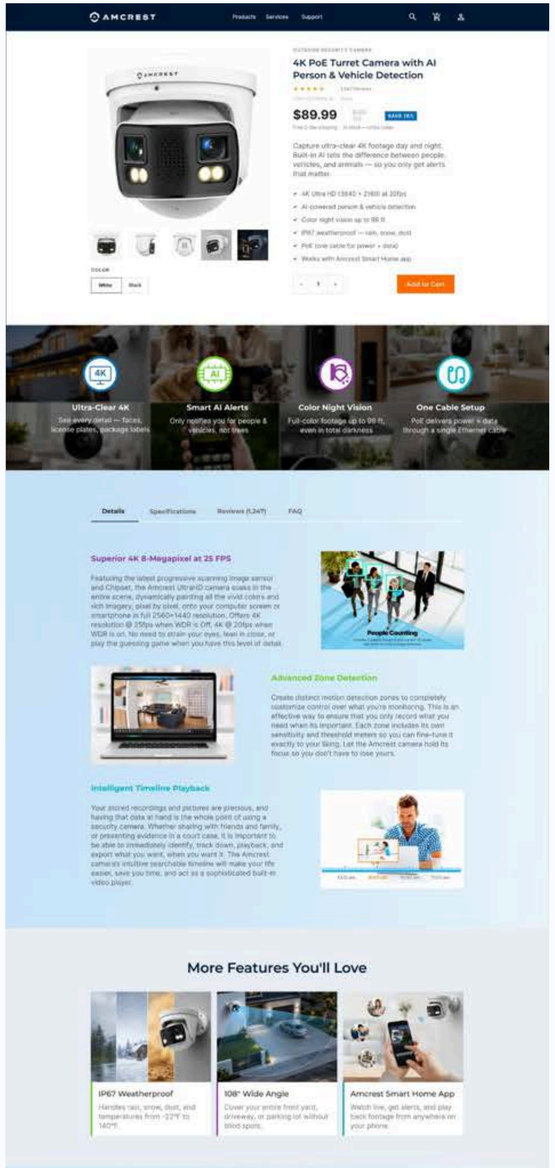

These four are not product categories, but rather product collection pages designed around usage scenarios and needs. The goal is to help new users make the right choice without having to search through model numbers themselves.

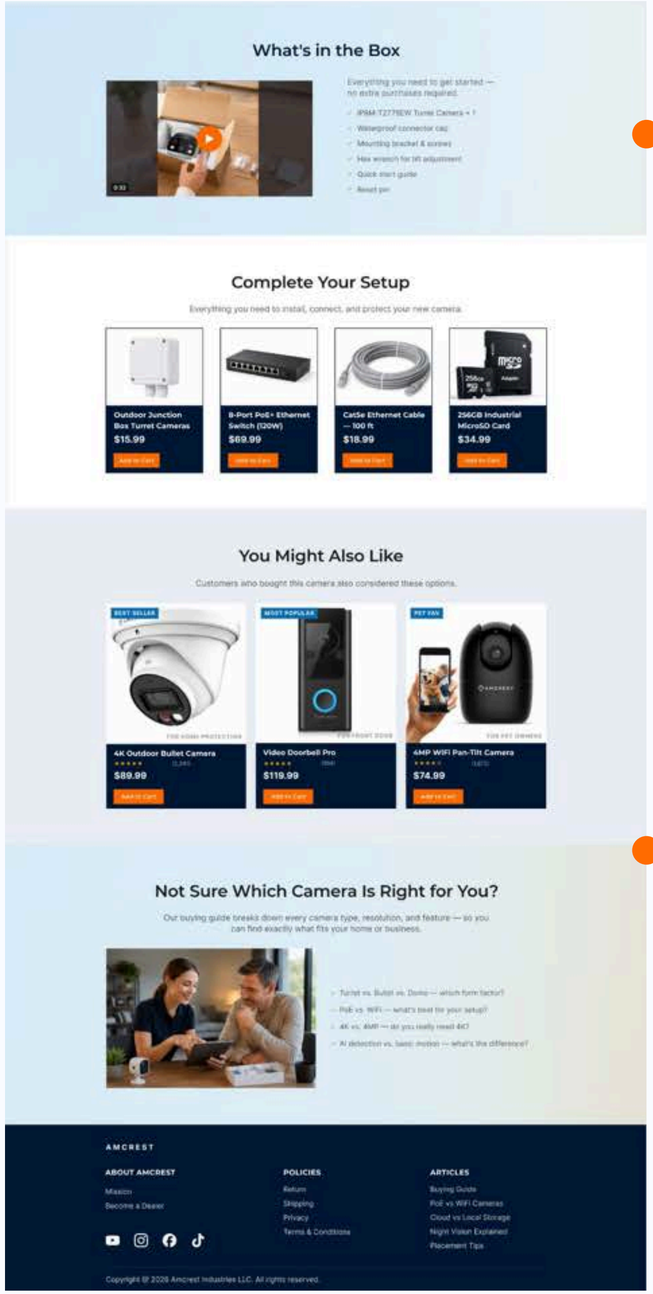

Product_Detailed

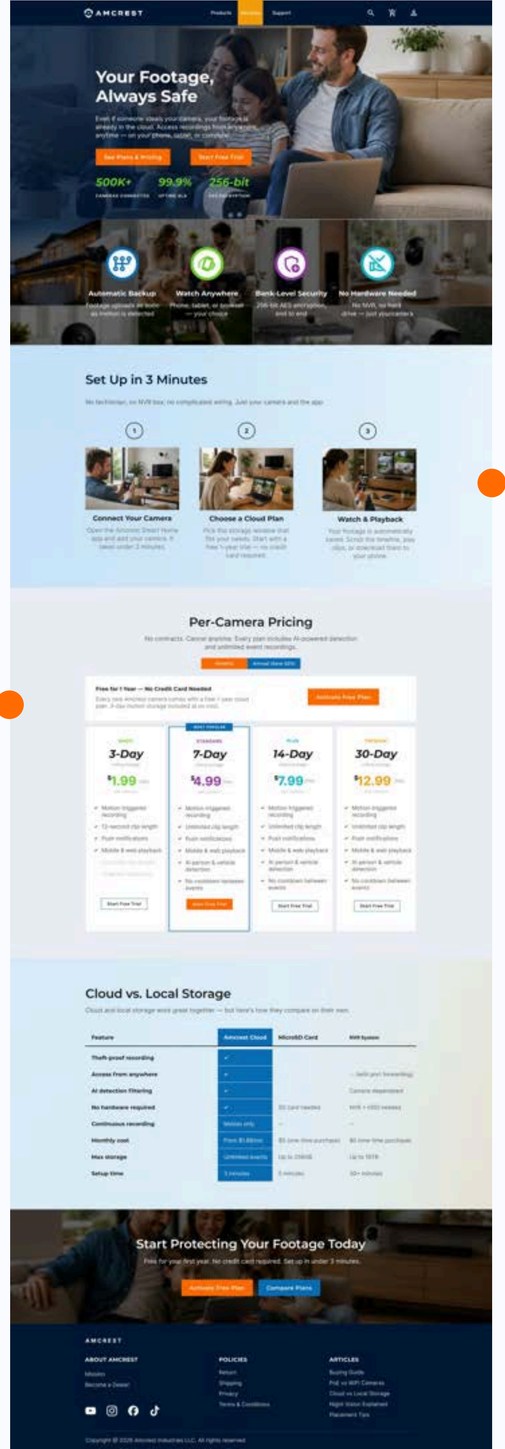

Use unboxing videos and packing lists to reassure users before they buy, addressing the audience's desire to "assemble it themselves rather than hire a professional."

Provide additional decision-making support so that even if a user has clicked on a specific product but is still hesitating, there is still a way out.

Service_Cloud

Telling new users plainly: you can do it yourself in 3 minutes, no technician needed.

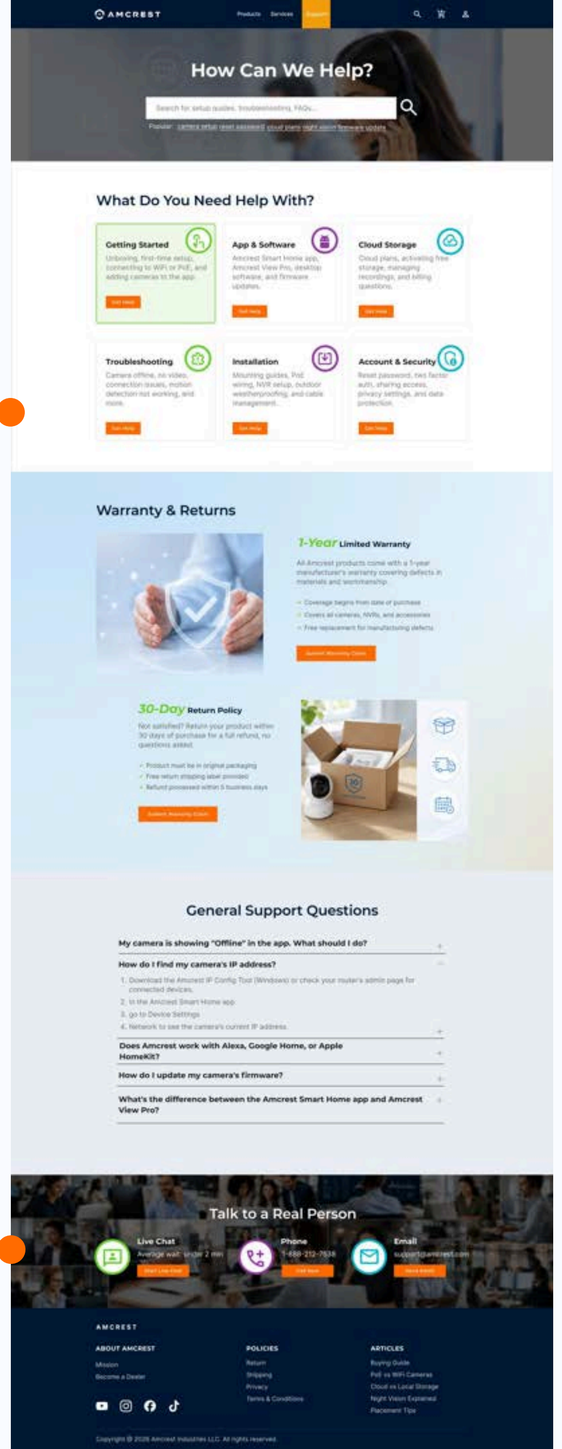

Four plans with distinct pricing, a "Most Popular" tag, and a monthly/annual toggle help users choose fast and nudge them toward higher tiers.

"Free for 1 year, no credit card" plus a Start Free Trial on every plan lets users try risk-free — driving cloud-subscription conversion.

Support_Center

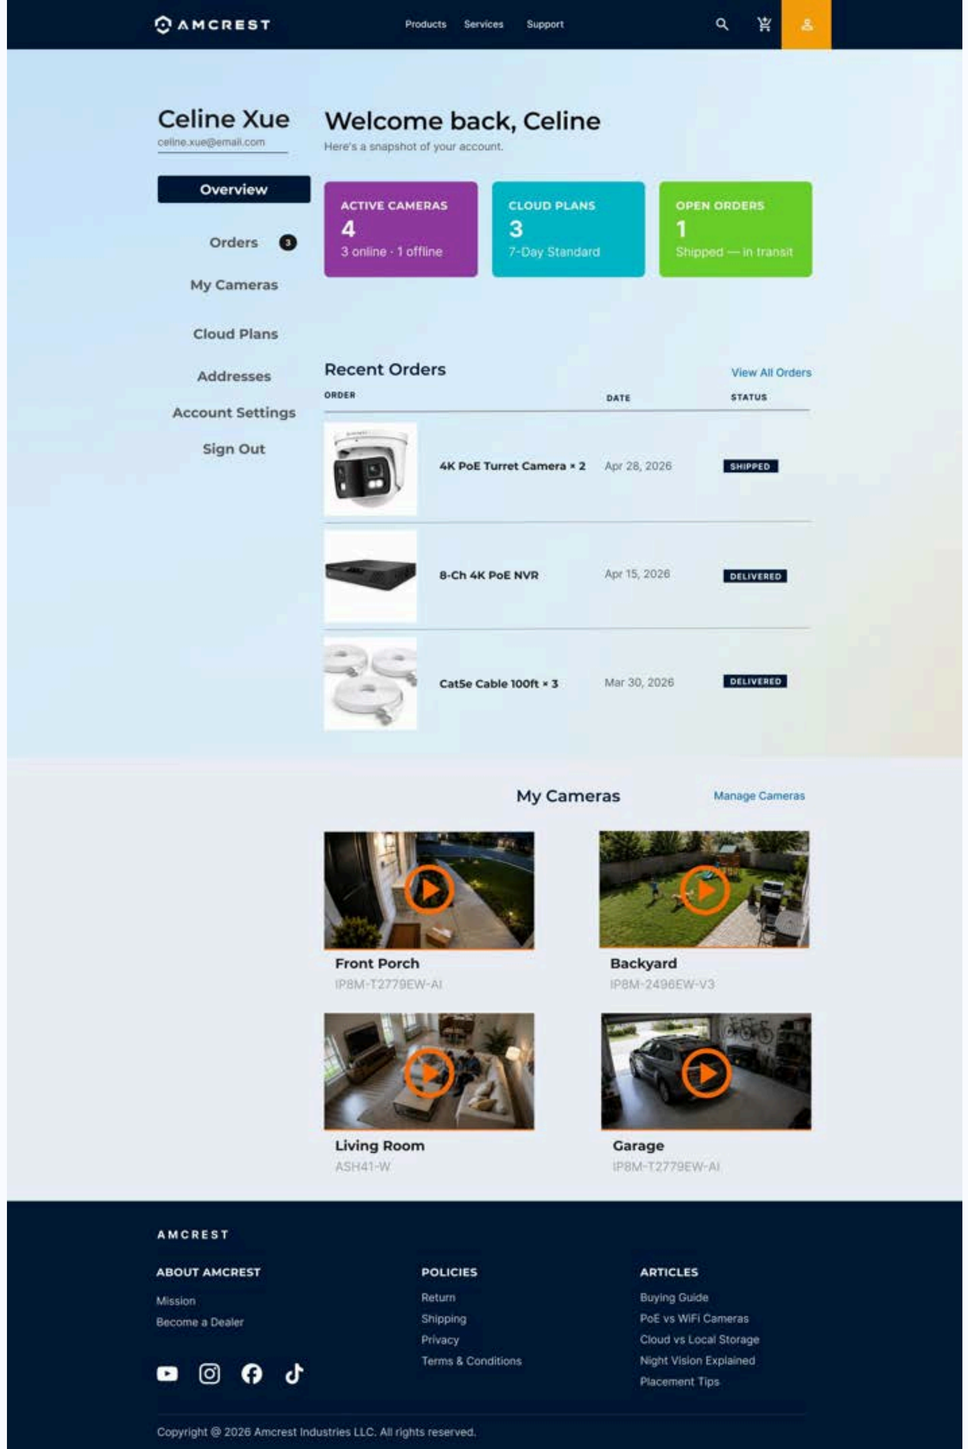

Replace the original website's cluttered list of help articles with a list organized by user questions.

Integrate the Live Chat feature—which previously popped up automatically on the original website and interrupted the purchasing process—into a unified entry point at the bottom labeled "Talk to a Real Person" (Live Chat / Phone / Email), so users can access it when needed without disrupting their browsing experience.

Account

Three snapshot cards (Active Cameras / Cloud Plans / Open Orders) plus Recent Orders and live camera feeds surface the most important status at a glance.

Amcrest

Mobile Design

Navigation: Hamburger Menu + Full-Screen Side-Slide Menu

Card Grid: Rearrange from 3 horizontal columns to 2+1

Image-Text Card: Stacked → image on the left and text on the right

Step Card: Number Repositioning for Vertical Flow(from the Top to the Left)

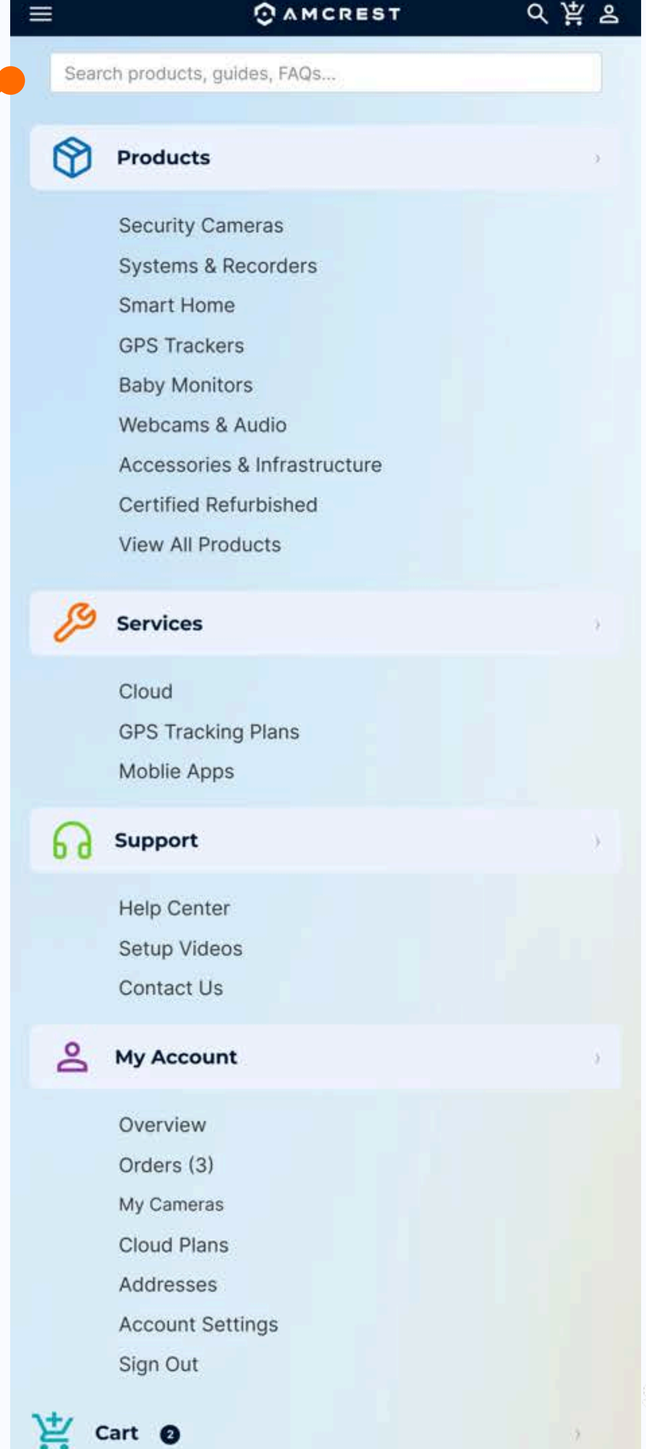

Mobile_Menu

In-Page Expansion vs. Page Redirect

In the original, tapping a title navigates to a new page, which makes users feel "lost" and raises the cost of going back. The new design uses an accordion to expand sub-items in place, so users always retain a sense of the overall structure and the interaction cost is nearly zero.

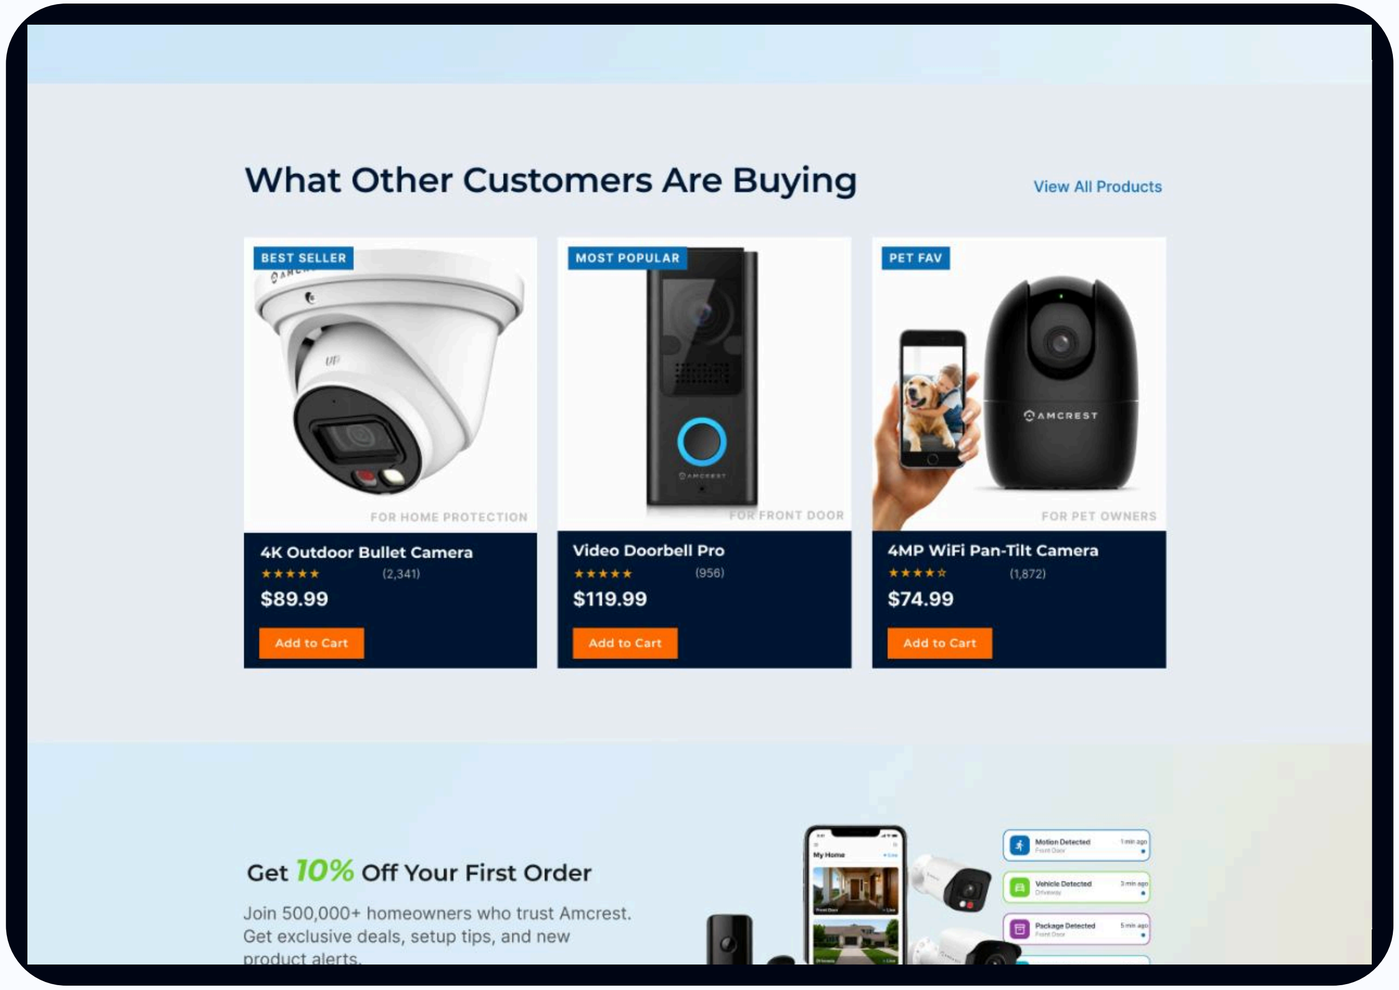

Add the new design adds an always-visible search bar at the top, shortening time-to-find and benefiting the top of the conversion funnel.

Each top-level category now has an icon. The combination of graphic + text speeds up category recognition and improves overall scannability on small screens.
